

SUNDAY HEALTH MESSAGE.

We are biological terms , terms or names of the parts of our bodies hidden in difficult languages to pronounce yet simple names are given to other things ,that are not ven pertinent , why are drugs have difficult names yet we use them to treat out bodies why not just simple names that we can graspsso easily . Is there anything suspicious about this , why must we latinize biological terms . Only one lease of life is granted us; and the inquiry with every one should be, “How can I invest my powers so that they may yield the greatest profit? How can I do most for the glory of God and the benefit of my fellow men?” For life is valuable only as it is used for the attainment of these ends. CD 15.1

Must study anatomy and physiology it is ainnto be igonarant in this

“I praise you because I am fearfully and wonderfully made; your works are wonderful, I know that full well.” — **Psalm 139:14 (NIV)**

“Know ye that the LORD he is God: it is he that hath made us, and not we ourselves; we are his people, and the sheep of his pasture.” Psalms 100:3

God own the interlectual copyright , of our body

Whatever we do in the line of eating and drinking should be done with the special purpose of nourishing the body, that we may serve God to His name's glory. The whole body is the property of God, and we must give strict attention to our physical well-being, for the religious life is closely related to physical habits and practices. All we have and are belongs to God; all is His property, and should be used in His service. You must learn this lesson, my sister, before you can merit a place among the undefiled EA 273.2

The great Master-Artist alone is the rightful owner of the works of His hands. By creation and by redemption we are His. The very dust out of which we were formed is His production; and “hath not the potter power over the clay?” Rightfully, He claims our entire service. “What? know ye not that your body is the temple of the Holy Ghost, which is in you, which ye have of God, and ye are not your own? For ye are bought with a price; therefore glorify God in your body, and in your spirit, which are God's.” EA 273.4

Chapter 1

Sickness Is No Accident: The body has a plan

"It is highly dishonourable for a reasonable soul, living in so divinely a built mansion as the body she resides in, to be totally unacquainted with its exquisite structure."

— Robert Boyle, 1690

The human body is the exquisite structure in which we reside, and surely it is the responsibility of every human being to know something about the house we live in. Allow me the pleasure of assisting you to become acquainted with your exquisite structure.

The human body has the ability to heal itself. It is a self-healing organism. The question is then posed: "If this is so, why are so many sick?" The human body will heal itself if given the right conditions. Unfortunately, many today are ignorant of these conditions.

The aim of this book is to explore the answer to this great question that billions of dollars in medical expenditure are not solving.

We can understand how cars, aeroplanes, computers and machinery work, and treat them with the respect they require in order to keep them operating in optimum

Parents

Health is a great blessing, and can be secured only in obedience to natural law. Good health is necessary for the enjoyment of life. A calm, clear brain, and steady nerve, are dependent upon a well-balanced circulation of the blood. In order to have good blood, we must breathe well. RH October 31, 1871, par. 1

Health is a great blessing, and can be secured only in obedience to natural law. Good health is necessary for the enjoyment of life. A calm, clear brain, and steady nerve, are dependent upon a well-balanced circulation of the blood. In order to have good blood, we must breathe well. RH October 31, 1871, par. 1

Mothers are accountable, in a great degree, for the health and lives of their children, and should become intelligent in regard to laws upon which life and health depend. Their work does not end here. They should carefully educate their children upon this subject, that they may, by obedience to nature's laws, avoid disease, and secure health and happiness. It is not necessary that all mothers should teach their children all the details of physiology and anatomy. But they should avail themselves of all the means within their reach to give their children instruction relative to the simple principles of hygiene. RH October 31, 1871, par. 2

Parents should study the laws of nature. They should become acquainted with the organism of the human body. They need to understand the functions of the various organs, and their relation and dependence. They should study the relation of the mental to the physical powers, and the conditions required for the healthy action of each. **To assume the responsibilities of parenthood without such preparation is a sin.**[CG 64.2

What cause will include

The course will embody such subjects as 1.**hydrotherapy (practical and theoretical)**,
2. massage (practical and theoretical), 3.hygienec,
4.physiology,
5.anatomy,
6.dietetics,
7. healthful cookery,
8.healthful dress,
9.the study of diseases and diagnosis, and 10.medical-evangelistic methods of field work. LLM 370.4

11.Tought how to deal with common diseases and accidents

They should understand the importance of guarding against disease by preserving the vigor of every organ and should also be taught how to deal with common diseases and accidents Every school should give instruction in both physiology and hygiene, and, so far as possible, should be provided with facilities for illustrating the structure, use, and care of the body. Ed 196.2 Ed 196.2

Defining some terms

The **study of anatomy**, the form and structure of the body; of **physiology**, the use and functions of the various organs; and of **hygiene**, the laws that underlie their healthful activities, is pursued from a Biblical and scientific point of view. RH October 11, 1898, par. 12
